Price: \$149.37 (plus GST)

Our double wall hot cups provide great insulation properties and do not require a sleeve. They are very popular in NZ markets. They are made of two layers of card and lined with PLA, a plant-based plastic, not a petroleum-based plastic. As food contamination is not a problem, the waste container can be sent to a landfill (to eventually breakdown into plant matter) or sent to a commercial composting centre (for conversion into compost). Brim capacity is 390ml/13floz (US) Safe fill level is 350ml/12floz (US)
